Polish Communists Gird for Showdown On Party Authority

By Michael Dobbs
Washington Post Service
WARSAW — A Polish deputy premier says the Communist authorities are ready for a new trial of strength with the independent Solidarity trade union federation over the issue of responsibility for police violence in March in the northern city of Bydgoszcz.

PAPAL MESSAGE — In an unexpected appearance, his first since he was shot on May 13, Pope John Paul II read a message from a balcony in St. Peter's Basilica Sunday to a congregation gathered for a Mass celebrating Pentecost.

U.S. and Russia Are Reported Set For Missile Talks

By Bernard Gwertzman
New York Times Service
WASHINGTON — The United States and the Soviet Union have agreed to begin working-level discussions in Washington in the next few weeks to prepare for negotiations later in the year on limiting each side's medium-range nuclear missiles in Europe, according to administration officials.

World Oil Prices Apparently Falling Again

New York Times Service
NEW YORK — World oil prices apparently have slipped again. Industry officials say that Nigeria was offering discounts of about \$2 a barrel on noncontract sales of its oil. This report late Friday followed an announcement by Ecuador that it has cut its official \$36 price to \$33 and a report that the British National Oil Corp. had offered to reduce prices by \$2 a barrel to \$37.25.

Haig Sees Flap if U.S. Builds Neutron Bomb

By Oswald Johnston and Robert C. Toth
Los Angeles Times Service
WASHINGTON — Secretary of State Alexander M. Haig Jr. has warned that any decision by the United States to deploy a neutron warhead in Europe would cause "a major problem" in the Atlantic alliance, despite a quiet administration decision in recent weeks to take an important step toward building the weapon.

Bangladesh Seen as Weathering Coup Crisis

By William Borders
New York Times Service
DACCAs — To the surprise of some pessimists, Bangladesh has weathered the all-important first stage of its present political crisis, which is one of the gravest it has had to face in its precarious decade of independence.

SMASHING — Bjorn Borg hits a return in his French Open victory against Ivan Lendl Sunday. Story, Page 15.

'Comic-Book' Invasion Attempt Unsettles Dominica

By Jo Thomas
New York Times Service
ROSEAU, Dominica — The plot was so bizarre and the conspirators so ill-assorted that the local newspaper called it a "comic-book escapade." In New Orleans, where even the federal judge hearing the case is not sure how to pronounce "Dominica," they call the affair the "Bayou of Ibs."

INSIDE

U.S. Relaxes Technology Sales to China

The Reagan administration, in a symbolic gesture of accommodation, will permit China to purchase American technology with potential military use. Page 4.

TOMORROW

A Look at South Korea

After nearly 18 months of turbulence, South Korea's young fifth republic seems to have achieved a measure of stability. But political and economic developments are still tinged with uncertainty. A special supplement on the country will appear Tuesday.

Tridium Allocation

Mr. Haig seemed unaware when questioned of a decision late last month by the Defense and Energy departments to allocate tridium needed for neutron warhead components to a program that could lead to production of the weapon.

UN Group Votes To Curtail Flags Of Convenience

GENEVA — Despite Western opposition, a United Nations shipping conference has recommended that countries allowing foreign vessels to sail under their flags for a fee should gradually phase out the practice.

Comic-Book Invasion Attempt Unsettles Dominica

Rightist white mercenaries flown from the Ku Klux Klan to the United States and Canada lured to join black nationalists and disgruntled soldiers in taking over the small, poor Caribbean island of Dominica and setting up what investigators have described as a drug, gambling and offshore banking empire under a former Dominican finance minister.

Rockwell International is builder of the Space Shuttle.

Seconds before "Columbia," the world's first reusable spaceship, touched down in California, Houston Control radioed: "Prepare for exhilaration!"

The exhilaration that followed was shared by people around the world. Because we all now share a technology bridge to the benefits of this vast new frontier of space.

Rockwell International is proud of its contributions to this achievement. Our Space Division is prime contractor to the United States' National Aeronautics and Space Administration (NASA) for the Shuttle orbiter — the most complicated flying machine ever built by man. Our Rocketdyne Division builds the main engines — the first reusable engines to go into space. And

we assist NASA in the integration of the entire Space Transportation System — coordinating the efforts of 50,000 people in many companies advancing the frontiers of many technologies.

Our achievements in space and aircraft development demonstrate the high technology you'll find in the businesses of Rockwell International.

We've made it our policy to work at the leading edge of technology: In our four major business areas — Aerospace, Electronics, Automotive and General Industries — we create technologies in everything from supersonic aircraft and million-mile truck axles to sophisticated offset printing presses, electronic products and systems for major strategic programs, and telecommunications

systems for the office of the future.

More than that, we've developed systems to manage these technologies that are as advanced as the technologies themselves.

We've put the right engineering and manufacturing teams together with the right management to successfully meet many of the world's unprecedented challenges.

NASA Photo

Thinking about the flight of "Columbia" could influence your thinking about executive jets.

It was perfection for all the world to see.

On April 14, 1981, after orbiting the earth for more than 54 hours, American astronauts John W. Young and Robert L. Crippen guided the world's first space shuttle toward a dry lake bed in California's Mojave Desert.

Because the spacecraft was at that moment powerless, nothing more than a 100-ton glider, its first attempt at landing had to be perfect. There was no second chance.

As tens of millions watched on television, *Columbia* touched down perfectly on Rogers Dry Lake.

The "fabulous success" of *Columbia* was not only a testimony to the skill and courage of the two astronauts, but to the enormous technology that shaped and sharpened their training for that historic flight.

They trained in the Gulfstream II.

Paradoxically, the astronauts trained for the landing of the space orbiter in an airplane designed and built as an executive jet: the Gulfstream II.

In 1974, NASA acquired two standard production Gulfstream IIs to be outfitted for the all-important role of Shuttle Training Aircraft (STA).

The selection of the Gulfstream II was made because it best met the space agency's training mission requirements for an airplane with the optimum combination of size and endurance, engine power and reliability, and structural integrity.

The flight controls and cockpit instrumentation have been extensively modified by Grumman Aerospace Corporation engineers to accept the inputs of on-board computers and other equipment that provide realistic orbiter flight characteristics. Large lateral motion control surfaces have been added under the wing to help simulate the orbiter's handling qualities.

Otherwise, the NASA Gulfstream IIs are structurally identical to the more than 250 currently in use by the world's best-known corporations and governments.

Every flight is torture time.

The training of *Columbia's* prime and back-up crews in the Gulfstream II is designed to acquaint them with abnormal energy situations in the spacecraft's approach, enabling the pilots to recognize and overcome such conditions.

In performing the training missions, the Gulfstream II is subjected to flight environments

far more tortuous than perhaps its designers and builders foresaw.

For example, there is extensive use of reverse engine thrust in flight, often against more than 90% of engine power, to simulate the drag of the spacecraft.

In simulating an orbiter approach, the Gulfstream II is forced into descent rates in which it drops as much as 16,200 feet per minute. Consider that about 3,000 feet per

minute is the normal initial descent rate for a corporate jet from about 35,000 feet.

In maneuvering, the aircraft is frequently banked as much as 50° or more to get into a desired position, creating a force of about 2g on the airframe.

Despite the increased maintenance and inspection this extreme kind of flying requires, each of the two NASA Gulfstream IIs has been providing about 500 flight training hours a year — about the same utilization Gulfstream executive jets have in a typical corporate operation.

Above: In training to land *Columbia*, command pilot John Young flew more than 1,300 approaches like the one being executed by this NASA Gulfstream II STA (Shuttle Training Aircraft). Accompanied by its T-38 chase plane, the Gulfstream II is being flown on a 20° glideslope with reverse engine thrust, main gear down for drag, and lateral motion control surfaces under the wing positioned to help simulate orbiter handling. Below: The Gulfstream III, with an advanced technology wing and winglets, improves on the performance characteristics of the Gulfstream II. Certificated under Part 25 regulations by the FAA in September 1980, the Gulfstream III already has established several World Class records, including a 4,866 statute mile flight non-stop from Kona, Hawaii to Washington, D.C., and sustained flight at the highest altitude ever attained by a business aircraft, 52,000 feet.

The Gulfstream III is the same, but better.

The heritage of superlative performance of the Gulfstream II is found today in the Gulfstream III being built and delivered by Gulfstream American.

Building on the proven airframe, engines and systems of the Gulfstream II, the Gulfstream III enlarges the productivity of long-range executive jets to a degree no other business aircraft can seriously challenge.

The Gulfstream III combines superior range/payload capability and cruising fuel efficiency with engine reliability, systems dependability and structural integrity unequalled by any aircraft designed as an executive transport.

Think about that as you evaluate the executive jet you want to take you through the 1980's and beyond.

For more information about the Gulfstream III, talk to Charles G. Vogeley, Senior Vice President of Gulfstream Marketing. Call him at (912) 964-3274, or write on your letterhead to: Gulfstream American Corporation, P.O. Box 2206, Savannah, Georgia 31402, U.S.A.

The Gulfstream III. The new definition of The Ultimate.

The Gulfstream III is on display in Paris during the 34th International Salon de l'Aéronautique et de l'Espace. To inspect the aircraft, contact Mr. Joseph E. Anckner, Director, Gulfstream International Sales, at the Gulfstream American Corporation Chalet, No. 31, Line A, Le Bourget. Telephone: 837-9258.

U.S. Labor Movement Becoming a Soft Cry in the Business Wilderness

By William Scrin

NEW YORK — Organized labor in the United States... 20 million strong, possessed of billions of dollars, celebrating what the AFL-CIO calls the 100th anniversary of the union movement...

23.4 percent in 1978, the latest period for which figures are available. That is less than it held in 1940. In autos, rubber, steel, and railroads, workers have been forced to grant substantive concessions to management...

This may be an excellent climate for business, which is able to win wage concessions, alter work rules, and do so with relatively little fear of being shut down by its workers. But it points to what a number of respected labor experts call plain weakness.

"The decline of militancy in the AFL-CIO has been steady for many years," added John Laster, a labor historian at the University of California at Los Angeles.

son: When unemployment averages more than 7 percent, as it has been, "the pressure to collaborate with management to save jobs is enormous."

Organization of workers, now a costly effort indeed, seems to have low priority. Sam Church Jr., president of the United Mine Workers, estimates that it takes about \$70,000 in wages and administrative costs to keep one organizer in the field for a year.

NEWS ANALYSIS
The 1970s unions won just 49.6 percent of their representational elections. Moreover, the days when labor could organize an entire industry, like autos, rubber, or steel, at one time, as it could and did in the 1930s, are past.

who teaches at Columbia University, explains that the idea is to unify unions with similar jurisdictions into larger, more rationally organized, powerful organizations.

A theory often advanced, by many labor executives themselves, is that part of the problem confronting labor is that it finds it extremely difficult to surmount its own success.

And if laboring people are comfortable, so too, critics say, are many labor leaders, with salaries and benefits often exceeding \$100,000 a year.

Harley Shaiken, a labor and technology specialist currently at Massachusetts Institute of Technology, thinks that some labor leaders believe industrial wages are excessive, and that therefore they are not opposed to cutbacks as long as the cuts are passed off as necessary to bring U.S. wages in line with foreign wages and union leaders are not blamed.

Labor leaders deny this. Lane Kirkland, president of the AFL-CIO, argues that labor has throughout its history periodically sat down with management "in times of extreme risk" to work out financial problems.

The UAW says it achieved a remarkable breakthrough when, during the 1979 contract negotiations, the corporation agreed to place Douglas A. Fraser, the union president, on the company's board of directors in exchange for major wage concessions.

Hormats: An Ability to Survive

Haig's Top Economic Aide Is Much in Demand After Succeeding Under Four Administrations

By Jane Seaberry

WASHINGTON — When Eileen Ford, head of the largest U.S. modeling agency, needed help in the overseas modeling business, she called a well-known number in Washington — she wanted Bob Hormats.

Hormats' political survival is a real-life example of an old Capitol Hill axiom: 'If you want to go along, you have to get along.'

He has had a hand in most major international trade decisions in the past decade, from the Multilateral Trade Negotiations to the Japanese auto-import discussions.

drige offered him a position as an undersecretary shortly after he had accepted an offer from Mr. Haig.

"It's hard to believe anyone can look that young and be so savvy and such a brilliant negotiator," another former colleague said.

He talks to all sides on an issue and advises his bosses, usually Cabinet-level officials. (His special talent is behind-the-scenes work, negotiating, bringing together two opposite sides to a consensus.)

He went from adviser to Henry Kissinger at the National Security Council at age 26 to deputy assistant secretary of state, to deputy special trade representative to his present position without falling on his face.

For a decade he has been a high scorer on the government's international trade team, but he's never been a star.

"I'm basically non-partisan or bipartisan," Mr. Hormats said in an interview in his State Department office.

Mr. Hormats looks 10 years younger than he is. He is unlined and shows no gray hair. He is more likely to be seen wearing thick tweed or herringbone suits than the uniform Washington stripe, and often pats around the office in his stocking feet.

While at Tufts University, where he received a Ph.D. from the Fletcher School of International Law and Diplomacy, he worked in Africa and interned two summers at the State Department's Africa bureau in Washington and in Bonn.

It was during lunch at Tufts one day that schoolmates told Mr. Hormats about a job offer on the bulletin board, an opportunity to work for Henry Kissinger at the National Security Council.

Mr. Hormats looks 10 years younger than he is. He is unlined and shows no gray hair. He is more likely to be seen wearing thick tweed or herringbone suits than the uniform Washington stripe, and often pats around the office in his stocking feet.

Robert D. Hormats, assistant secretary of state for economic and business affairs, says he is "non-partisan or bipartisan."

National Security Council. Mr. Hormats said he thought about it, applied and got the job at age 26. Mr. Hormats and Mr. Haig became acquainted at the NSC. Mr. Hormats was adviser first to C. Fred Bergsten, then Mr. Kissinger, Gen. Brent Scowcroft and Zbigniew Brzezinski.

interests is energy. He said he would like to try to work out understandings with other major energy importing countries on preventing disruptions of oil supplies.

A European Union That Failed

Dunlop-Pirelli, Seen as a Prototype for Europe, Doomed by Financial Imbalances, Tax Policies

By Elizabeth Bailey

LONDON — When Dunlop of Britain and Pirelli of Italy, both tire manufacturers, announced that they were going to form a union, it was seen as a symbol of the impending economic integration of Europe.

Financial Imbalances
Financial imbalances, highlighted by harsh economic trends as well as the failure of any consistent European-wide tax policy to emerge, have spelled the ruin of other trans-European mergers begun around the same time.

Financial Imbalances
Financial imbalances, highlighted by harsh economic trends as well as the failure of any consistent European-wide tax policy to emerge, have spelled the ruin of other trans-European mergers begun around the same time.

— as, indeed, with the others — the venture seemed to make a great deal of sense at the time. "The scale of technology in the tire industry was becoming a lot more expensive, and there was growing competition from American tire manufacturers," Mr. Marsh said.

Things did not quite work out as planned. "Within a year of the marriage, Italy went absolutely sick," Mr. Marsh recalled. "A year later, we had to write off our investment in Italy of \$87 million at current exchange rates. It was a fairly traumatic experience for us."

The decision to disband was touched off by Pirelli's reluctance to invest more money in the British business. According to a statement issued by the company at the time of the announcement of the dissolution, this meant "one of the original aims of the union, the creation of a single business, is, under present circumstances, impossible to fulfill."

In addition to its problems in the British market, Dunlop has been faced with a possible takeover bid. Over the last 15 months, investors in Malaysia, where Dunlop has a plantation and manufacturing plant, have been buying up shares in the company.

Those problems — mainly the result of the recession in Britain and abroad — have affected most of Dunlop's businesses, which include industrial and consumer products and sports equipment.

Right now, Dunlop is concentrating on getting its own house in order. In the last three years, Dunlop has spent more than \$102 million on modernizing its European tire business.

"Supply and demand are coming slowly into equilibrium," Mr. Marsh said. "Consequently, tire prices are likely to harden. At the moment, nobody in Europe is making any money out of tires."

Air France Expected to Buy Small Airbuses

From Agency Dispatches

PARIS — Air France is expected to sign a letter of intent this week for the purchase of up to 50 smaller Airbus jets, officials of the airline and the consortium that makes the plane said Sunday.

Japan's Steel Recession to Continue To September, Nippon Chief Says
TOKYO — Japan's steel business is still in recession, despite the government's remark that Japanese business is generally bottoming out, according to Eishiro Saito, president of Nippon Steel.

United and Eastern have publicly expressed the need for a fuel-efficient jet that will carry passengers relatively short distances during the 1990s and beyond.

The consortium, which includes the governments of France, West Germany, Britain, Italy and Spain, claims a commanding lead in the race to win airline orders of a new generation of 150-seat airliners, which are expected to go into commercial service in 1986.

Joseph S. Sutter, vice president for operations and development at Boeing, said the 7-7 prototype is on the drawing boards, and the company hopes to bring it out "sometime in 1987."

Both Mr. Sutter and Mr. Wheeler on Saturday had characterized the Airbus presentation of the A-320 as "premature."

operation with the airline industry in view of international competition, with possible changes in the various costs, taxes and other policies.

Officials said California Westair Saturday ordered six of the 100-seater aircraft and took an option on eight more. Deliveries begin in 1984. Last month, state-owned BA announced Air Wisconsin had ordered four of the shorthaul jetliners and taken options on four others.

THREE LEVELS OF TIME
By Harold T.P. Hayes. 236 pp. \$13.50.
Dutton, 2 Park Ave., New York 10016.
Reviewed by John Leonard

THE "Three Levels of Time" are, of course, the past, the present and the future. They have a way of molesting one another. There are also, in Harold Hayes' new book, three levels of narrative: the story of this planet after the Big Bang; the story of an automobile accident involving a field representative for a company that sells kidney-dialysis machines; and the story of Hayes, a former editor in chief of Esquire magazine, who has spent the last few years interviewing scientists who view with alarm what human beings are doing to plants, animals, insects, air, water and themselves. Finally, there are three levels of broad concern, including instinct, intelligence and strategies of survival.

Oil and Money Conference. London, Sept. 28-29. The second annual International Herald Tribune/Oil Daily conference on "Oil and Money in the Eighties," will take place September 28 and 29 in London.

JUMBLE. THAT SCRAMBLED WORD GAME by Henri Arnold and Bob Lee. Unscramble these four Jumbles, one letter to each square, to form four ordinary words. STYTE, MYTIA, TINNEY, BEJOCT.

DENNIS THE MENACE. Listen carefully—my advice doesn't come cheap. ATTORNEY AT LAW. WHAT YOU HAVE TO PAY TO GET THE MOST OUT OF WHAT YOU'RE TOLD. Now arrange the circled letters to form the surprise answer, as suggested by the above cartoon.

PEOPLE: Kennedy's at White House As Eitel Accepts Medal

For one brief moment, the Kennedy clan was center stage at the White House again, gathering in the Rose Garden as President Reagan presented a special congressional medal to Eitel Kennedy in memory of her husband, Sen. Robert F. Kennedy, who was assassinated 13 years ago.

A brassiere, strapless gown and gloves worn by Marilyn Monroe go on sale Wednesday at Sotheby's auction house in London. Sotheby's said the actress, who died of an overdose of sleeping pills in 1962, left the pink mesh bra during a visit to Madame de Bachille's dress salon in London's Soho district.

Language Speakerspeak

By William Safire

NEW YORK — "A folk hero," grumbled Tip O'Neill, speaker of the House, about Ronald Reagan. "He can dialogue with the American people. He comes on the tube so beautiful. He could sell anything."

Ordinarily, I would castigate the speaker for his participation in Linguagate: To change "engage" to "dialogue" is as bad as to subvert "give priority" with "prioritize."

On top of that, Tip tripped over an adverb: "He comes on the tube so beautiful." If "beautiful" is intended to modify "comes," or "comes on," or "comes over" (the verb phrase he meant to say), it should be "beautifully."

However, Tip's phrase has an impeccable pedigree: "As a man thinketh in his heart, so is he" (Proverbs 23:7), and Matthew 9:4 quotes Jesus as asking, "Wherefore think ye evil in your hearts?"

That is why the speaker can dialogue as beautiful as he wants this week. I feel in my head it is only fair. "A Perceptive Professor," sub-

headlined The Bergen Record. "Perfects the Penultimate Presidential Poll." That was nice alliteration, but the word "penultimate" was misused. In the same way, an Associated Press story last year told of "Walter Cronkite's penultimate presidential convention."

Ann Rubin, lately of Oakland, N.J., sent in these clips with the notation: "In each instance, the writers use 'penultimate' to mean ultimate or final, and not next-to-last, which is what I understand it to mean."

At Random House, dictionary editor Keith Hollman says, "If penultimate gets to sound too familiar, the next misuse would be antepenultimate, which traditionally has meant the third from the end, the one before the penultimate."

Lexicographer Stuart Flexner, a frustrated adman, adds: "I'm surprised a copywriter hasn't claimed that Mr. Cross's or Mr. Bic's product isn't the 'penultimate.'" That way lies Aunt Madna.

In Cursors! The Washington Post's internal publication of language self-criticism, copywriter Dan Griffin pointed out a couple of recent uses of "glitzy," a recently coined adjective meaning "ostentatious" or "extravagantly showy." He speculated that the word might be the offspring of "glitter" and "ritzy."

Not even close, but give him a cigar. Fred Miah, editorial director at Merriam-Webster, says that "glitzy" is from the Yiddish glitz, meaning "glitter," akin to the German glitzern, or "glittering." Its first citation was in 1971, and the word has been gaudily gaining in use lately.

Penultimate does not mean "real-real ultimate" or "the absolute livin' end." From the Latin paene ultima, or "almost the last," it is used in linguistics to denote the next-to-last syllable of a word, and more widely to mean "the one before the very end."

The Moral Life of Children

"Until . . . I Started Working Abroad; I Don't Think I Realized How Hard It Is for a Lot of American Children to Get Moral Notions About This Life."

By Jane See White

CAMBRIDGE, Mass. — Twenty years ago, a young man took up his black doctor's bag and presented himself to the children of the troubled American South. The children talked to him and he listened.

From this labor of listening, the man wrote five books, "Children of Crisis," one million Pulitzer Prize-winning words about children and how they cope with crisis — the crises of racial strife, of poverty and rootlessness, of wealth, of social isolation and much more.

Now that it's finished, Robert Coles, the man with the black doctor's bag, a distinguished Harvard child psychiatrist, has reached a conclusion: For 20 years he missed the point.

Through all those years, he says, he did not see what he calls the Central Riddle in children's lives. Not seeing it, he sought no answer.

What do America's children believe in? What are their answers to the universal questions that all children ask: questions like why am I here, anyway, and what am I willing to live for?

Coles said he realized now that many of the children of crisis, whose musings and dreams and drawings he studied for 20 years, had found their answers to those questions.

He recalled, for instance, the Southern "redneck" youth who faced down a gang of white toughs who had cornered a black boy in school. Later the boy told Coles that "something in me just drew the line."

A lot of the kids I tried to comprehend . . . psychologically or sociologically, which was the fashionable way of comprehending people, were in fact demonstrating moral behavior," Coles said. "I think in retrospect that's what I've been studying for 20 years — the moral life of children."

He is the author of books about the poet William Carlos Williams — a friend, when Coles was a student — about the Southern novelist Walker Percy and about Daniel Berrigan, whom Coles sheltered for a time when the rebel priest was underground.

In Atlanta during the '60s, when he was studying the South's children, Coles was also known to be the Student Non-Violent Coordinating Committee's "resident shrink." His book "Still Hungry in America" helped provoke the food stamp program.

Coles knew that behind "her pietistic avowals and her quick smiles . . . one would find a terror-struck black child, just barely in control of herself — or so I thought . . ."

He came to believe that he was wrong. "It was possible for a child of poverty, a child whose parents could neither read nor write, to reach into her heart and find the 'moral stamina' to face a year-long, daily ordeal with grace and courage. Ruby Bridges, a child of 6, was a moral being."

Such a phenomenon did not occur to Coles in 1960. It does now. That leaves Coles seeking answers to the riddle he didn't recognize then, his Central Riddle.
